BRIGHT NEBULAE

RA h m s	Dec ° ′ ″	Name	Dim ′ Maj x min	Type	BC	Color	Notes
18 30 24.0	−10 48 00	IC 1287	20 x 10	R	3-5	1-4	
18 18 36.0	−13 58 00	IC 4703	35 x 28	E	1-5	3-4	**Eagle Nebula**. Brightest over an area 10′.0 x 8′.0 off the SE side of the involved open cluster. Approximately centered in this space is a conspicuous absorption patch, which on photos resembles a horse and rider.
18 19 36.0	−16 01 00	IC 4706					
18 20 48.0	−16 11 00	NGC 6618	20 x 15	E	1-5	3-4	= **M 17**, **Swan** or **Omega Nebula**. Very bright and detailed with a conspicuous "2" shape. With the exception of the Orion nebula, it is the brightest galactic nebula visible to northern observers. Cluster is involved.
18 06 06.0	−14 10 00	Sh2-46	30 x 20	E	3-5	3-4	Except to the N, this region is rich in stars, especially to the E.
18 25 12.0	−13 13 00	Sh2-53	15 x 11	E	3-5		Set in a starry field, this object consists of several individual condensations.
18 18 00.0	−11 40 00	Sh2-54	60 x 30	E	1-5	3-4	Mottled and brightest in the NE sector. The brightest single condensation is a patch about 5′ across located 35′ due N of the open cluster NGC 6604.
18 32 12.0	−11 46 00	Sh2-55	20 x 20	E	5-5	1-4	Very faint diffuse nebulosity in a rich star field. There is a coarse pair of brighter stars (sep. about 30″, NW-SE) on the W edge.

DARK NEBULAE

OPEN CLUSTERS

RA h m s	Dec ° ′ ″	Name	Mag	Diam ′	No. ★	B ★	Type	Notes
06 22 05.0	−06 19 06	Be 73		2	15	16.0	cl	(A) Tiny (1′ long), but impressive, N-S star chain at center.
05 35 16.0	−05 23 00	NGC 1976		47			cl	
05 35 26.0	−05 55 00	NGC 1980	2.5	15	30		cl	
05 39 16.0	−17 51 00	NGC 2017		10	8	8.0	ast?	A scattered group of a few stars; not a true cluster. It contains the multiple star h3780.
06 20 50.0	−07 17 00	NGC 2215	8.4	8	40	11.0	cl	Moderately rich in stars; moderate brightness range; slight central concentration; detached.
06 26 37.0	−09 38 30	NGC 2225			40		cl?	(S) NGC 2225/6. Single well-defined object, see notes NGC 2226.
06 26 37.0	−09 38 30	NGC 2226		0.8			ptcl	(A) Core of cluster NGC 2225.
06 33 47.0	−05 05 00	NGC 2250		10	25	8.7	ast?	Few stars; moderate brightness range; not well detached. (A) Oblong (E-W) 10′ x 5.5′ group.
06 36 24.0	−14 09 00	Ru 1		6	15	11.0	cl	Few stars; small brightness range; no central concentration; detached.

BRIGHT NEBULAE

RA h m s	Dec ° ′ ″	Name	Dim ′ Maj x min	Type	BC	Color	Notes
05 38 30.0	−07 05 00	IC 430	11 x 11	R	2-5		Very diffuse, fan-shaped nebulosity centered 10′.0 NW of 49 Orionis. The fan converges to a bright spot at a point 13′.0 NW of the star. This spot, measuring 1′ x 0.3′, is extended roughly E-W and forms an isosceles triangle with two field stars a couple of arcminutes SW.
05 35 24.0	−05 27 00	NGC 1976	65 x 60	E+R	1-5	3-4	= **M 42**, **Orion Nebula**. Very bright and mottled. This galactic nebula is visible to the naked eye.
05 35 24.0	−05 54 00	NGC 1980	14 x 14	E	3-5	4-4	The southernmost semi-detached part of the **Orion Nebula**.
05 35 36.0	−05 16 00	NGC 1982	20 x 15	E+R	1-5	3-4	= **M 43**. Bright nebulosity with a mag 7 star involved; part of **M 42**, **Orion Nebula** and separated from it by a dark lane.
05 36 30.0	−06 42 00	NGC 1999	2 x 2	E	1-5	1-4	Bright roundish nebula; illuminating star is V380 Ori (V = 10.3).
06 03 30.0	−09 44 00	NGC 2149	3 x 2	R	3-5	1-4	Nebula involved around a mag 9.3 star. There is a small, round absorption patch about 1′ across off the SW sector.
06 07 30.0	−06 24 00	NGC 2170	2 x 2	R	1-5	1-4	A mag 9.5 star involved; connected with vdB 69.
06 09 30.0	−06 20 00	NGC 2182	2.5 x 2.5	R	1-5	1-4	A mag 9.0 star involved in nebulosity.
06 10 48.0	−06 13 00	NGC 2183	1 x 1	R	3-5	1-4	
06 11 06.0	−06 13 00	NGC 2185	1.5 x 1.5	R	3-5	1-4	A small, bright patch. There is also some faint nebulosity involved around a small group of four mag 11-12 stars 3′ to the SW.
06 19 58.1	−10 38 14	Red Rectangle	1.0 x 0.7				
05 20 00.0	−05 40 00	Sh2-278	25 x 20	E	4-5	3-4	
06 08 06.0	−06 14 00	vdB 68	4 x 3	R	3-5	1-4	Nebula with a mag 9.0 star involved. It is similar in structure to the nebulosity involved in the Pleiades star cluster.
06 08 06.0	−06 22 00	vdB 69	2 x 2	R	3-5	2-4	Nebula with a mag 9.0 star involved; connected with NGC 2170.
06 31 48.0	−09 40 00	vdB 80	5 x 3	R	3-5	1-4	Nebulosity around a compact cluster; three brighter stars and two fainter ones involved.

BRIGHT NEBULAE

RA h m s	Dec ° ′ ″	Name	Dim ′ Maj x min	Type	BC	Color	Notes
18 09 30.0	−23 44 00	IC 1274	7 x 7	E	1-5	3-4	This is the northernmost and second brightest in a group of nebulae including ICs 1275, 4685 and NGC 6559. The nebulosity is involved around a N-S chain of three equally spaced stars, two 9th and one 10th mag.
18 10 00.0	−23 50 00	IC 1275	10 x 6	E	1-5	3-4	Roundish nebula around two stars, mags 8 and 9. The N border is defined by the dark nebula Barnard 91.
18 17 48.0	−19 40 00	IC 1283/84	17 x 15	E+R	2-5	3-4	Irregular in shape; many fainter stars involved.
18 09 06.0	−23 25 00	IC 4684	3 x 2	R	3-5	1-4	A tiny patch of nebulosity surrounding a 9th mag star.
18 09 18.0	−23 59 00	IC 4685	15 x 10	R	3-5	3-4	Roughly centered around a 7th mag star, this is the largest and faintest in a group of nebulae including ICs 1274, 1275 and NGC 6559.
18 02 18.0	−23 02 00	NGC 6514	20 x 20	E+R	1-5	3-4	= **M 20**. **Trifid Nebula**. Approximately trisected by three prominent dark lanes aligned NE, S and W. Cluster involved.

BRIGHT NEBULAE

145

RA h m s	Dec ° ′ ″	Name	Dim ′ Maj x min	Type	BC	Color	Notes
18 03 48.0	−24 23 00	NGC 6523	45 x 30	E	1-5	2-4	= **M 8**, **Lagoon Nebula**. The densest section of the nebulosity is known as the **Hourglass**. One of the brightest nebulae, it can be seen with the unaided eye. A prominent dark lane splits the southern one-third of the object.
18 04 48.0	−23 35 00	NGC 6526	40 x 30	E	3-5	3-4	
18 10 00.0	−24 06 00	NGC 6559	8 x 5	E	1-5	3-4	The brightest condensation in a large nebular complex including ICs 1274, 1275 and 4685.
18 16 54.0	−19 47 00	NGC 6589	5 x 3	R	1-5	1-4	A pair of 10th mag stars (h2827; sep. 20″, ENE-WSW) involved in nebulosity.
18 17 06.0	−19 52 00	NGC 6590	4 x 3	R	1-5	1-4	Small, roundish nebula surrounding a pair of 11th mag stars.
18 15 54.0	−20 15 00	Sh2-35	10 x 7	E	3-5	3-4	Very irregular in shape and fairly diffuse. This nebulosity is set on a background extremely rich in very faint stars.

DARK NEBULAE

RA h m s	Dec ° ′ ″	Name	Dim ′ Maj x min	Opacity	Notes
17 57 37.4	−17 40 00	B 84a	16 x 16	5	Round.
18 02 25.2	−23 01 00	B 85			Trifid nebula.
18 03 01.5	−27 52 00	B 86	5 x 5	5	Several small stars in it; cluster NGC 6520 close E.
18 04 35.0	−24 06 52	B 88	2.0 x 0.5		Extended N and S; in M8.
18 04 59.8	−24 21 50	B 89	0.5 x 0.5		Very small; in M 8.
18 10 14.1	−28 16 50	B 90	3 x 1	5	Irregular; elongated N and S.
18 10 07.5	−23 42 00	B 91	5 x 2	5	Edge of diffused nebulosity.
18 15 35.2	−18 14 00	B 92	15 x 9	6	Black spot.
18 16 53.6	−18 04 00	B 93	15 x 2	4	Cometary; a sharply defined black head, with a diffused tail.
18 33 16.4	−26 03 40	B 98	3 x 3	6	Very small; black; sharply defined.
18 33 17.5	−21 29 00	B 99	11 x 3	3	Definite.
17 56 36.8	−29 01 00	B 289	35 x 7	4	Dark space between star clouds.
18 01 30.3	−28 36 30	B 294	3 x 3	3	Definite; star in SW part.
18 04 04.4	−24 32 00	B 296	6 x 1		Narrow; black; on S edge of M8.
18 04 20.9	−18 45 00	B 297	90 x 60	3	Region of irregular, dark markings, 2° E of M23.
18 06 20.4	−27 18 00	B 299		3	Several small spots in star cloud, each about 3' in diameter.
18 08 50.8	−18 42 00	B 301	45 x 2	3	Dusky lane; NE and SW.
18 09 13.5	−23 58 00	B 302	0.5 x 0.5	5	Dark spot.
18 09 28.6	−24 00 00	B 303	1 x 1	5	Very black; crescent shaped, convex to E.
18 13 20.8	−18 43 00	B 304		3	Dusky lanes in star cloud extending toward the SW from B92 for 1one half degrees.
18 15 44.6	−25 43 00	B 306	4.0 x 0.5	3	Small, narrow, black; elongated NE and SW.
18 18 36.3	−17 57 00	B 307	6 x 1	3	Narrow, dusky mark in star cloud; NE and SW.
18 19 08.4	−22 14 00	B 308	7 x 5	3	Curved; dusky; E and W.
18 23 08.5	−24 02 00	B 309	5 x 5		Irregular; dusky.
18 30 13.1	−18 35 11	B 310	2 x 2	3	Small star near center.
18 30 27.2	−17 40 00	B 311	6 x 1	4	Black, elliptical NE and SW.
18 42 18.4	−20 02 00	B 315	5 x 5	3	Round; dark.

BRIGHT NEBULAE

RA h m s	Dec ° ′ ″	Name	Dim ′ Maj x min	Type	BC	Color	Notes
18 02 18.0	−23 02 00	NGC 6514	20 x 20	E+R	1-5	3-4	= **M 20**, **Trifid Nebula**. Approximately trisected by three prominent dark lanes aligned NE, S and W. Cluster involved.
18 03 48.0	−24 23 00	NGC 6523	45 x 30	E	1-5	2-4	= **M 8**, **Lagoon Nebula**. The densest section of the nebulosity is known as the **Hourglass**. One of the brightest nebulae, it can be seen with the unaided eye. A prominent dark lane splits the southern one-third of the object.
17 46 36.0	−29 18 00	Sh2-16	12 x 12	E	3-5	4-4	In a rich star field. There is a small patch of nebulosity 3′ across, centered about 5′ off the NE edge of Sh 2-16.

DARK NEBULAE

RA h m s	Dec ° ′ ″	Name	Dim ′ Maj x min	Opacity	Notes
16 40 33.6	−24 04 00	B 44		5	Dark lane E from Rho Ophiuchi region.
16 46 26.2	−21 36 00	B 45		5	Rather definite.
16 57 12.9	−22 44 00	B 46	12 x 12	6	Irregular; definite; a string of small stars in the middle.
16 59 42.9	−22 39 00	B 47	15 x 15	5	Irregular; definite; connected with B51 by two sharp lanes.
17 04 44.0	−22 16 00	B 51	20 x 20	6	Definite.
17 08 22.2	−23 40 00	B 57	5 x 5	6	Elongated NE and SW.
17 11 23.6	−27 30 00	B 59	60 x 60	5	Sink hole; at the W end of a wide broken lane from B78.
17 11 51.2	−22 26 00	B 60	13 x 13	3	Curved; extended NE and SW.
17 14 59.9	−20 29 00	B 61	10 x 4	6	Small; elongated E and W.
17 16 12.3	−20 53 00	B 62	19 x 19	6	Very black in NW part.
17 16 28.3	−21 29 00	B 63	100 x 20	3	Large, definite, curved figure, convex to N.
17 17 16.7	−18 29 00	B 64	20 x 20	6	Cometary; W of M 9.
17 19 36.4	−26 42 00	B 65	12 x 12	6	Definite; elongated E and W.
17 19 57.1	−26 54 00	B 66	8 x 8	6	Definite; extended E and W.
17 20 57.1	−26 52 00	B 67		6	Definite; extended N and S; connects B65 and 66.
17 22 30.0	−21 53 00	B 67a	13 x 13	6	Irregular; definite.
17 22 36.4	−23 47 00	B 68	4 x 4	6	Small; irregular; sharply defined; about 20′ SW of B72.
17 22 55.9	−23 55 00	B 69	4 x 4	6	Very small; irregular; sharply defined.
17 23 32.3	−24 02 00	B 70	4 x 4	4	Sharply defined on W side.
17 23 02.2	−24 00 00	B 71			Very small.

DARK NEBULAE

146

RA h m s	Dec ° ′ ″	Name	Dim ′ Maj x min	Opacity	Notes
17 23 35.9	−23 37 00	B 72	4 x 4	6	**Snake Nebula**. S-shaped.
17 24 08.2	−24 17 10	B 73	1 x 1		Very small; extended N and S.
17 25 08.0	−24 12 00	B 74	15 x 10	5	Slightly curved, sharpest on W and S sides.
17 25 17.7	−22 02 00	B 75		5	Curved and scalloped marking.
17 25 38.8	−24 25 00	B 76	30 x 30	4	Irregular, narrow, black strip E and W.
17 28 37.0	−23 51 00	B 77	60 x 60	3	Indefinite; connected by a vacant strip with B78.
17 32 43.3	−25 36 00	B 78	200 x 140	5	Very large.
17 37 23.2	−19 37 00	B 79	30 x 30	6	Narrow; sharply defined SE and NW.
17 37 42.7	−21 16 40	B 80	3 x 1	3	Small; definite; elongated SW and NE.
17 38 32.7	−23 56 00	B 81			Very small; diffused; close SW of NGC 6401.
17 38 37.2	−23 47 00	B 82		3	Small; angular; well defined; 8′ N of NGC 6401.
17 38 58.6	−24 11 00	B 83	7 x 7	7	Irregular; several small stars in it; narrow extension to the S.
17 45 18.7	−20 00 00	B 83a	4 x 4	6	Small; definite.
17 46 25.6	−20 15 00	B 84		6	Irregular looped figure; sharply defined.
17 57 37.4	−17 40 00	B 84a	16 x 16	5	Round.
18 02 25.2	−23 01 00	B 85			Trifid nebula.
18 03 01.5	−27 52 00	B 86	5 x 5	5	Several small stars in it; cluster NGC 6520 close E.
16 48 54.4	−29 48 00	B 236			Center of system of indistinct dark lanes.
16 48 55.0	−29 58 00	B 237	30 x 6	1	Dark lane N of magnitude 8 star.
16 52 21.8	−23 08 00	B 238	13 x 13	6	Irregular.
17 09 46.1	−29 35 00	B 243	25 x 25	3	Very irregular.
17 10 51.8	−28 25 00	B 244	30 x 20	5	Irregular; sharpest on W side.
17 11 55.6	−29 24 00	B 245	8 x 8	3	Round; diffused; several bright stars in it
17 12 01.9	−22 39 00	B 246	20 x 20	3	Irregular.
17 13 04.2	−28 59 00	B 248	10 x 3	5	Irregular; elongated E and W.
17 13 04.8	−29 09 00	B 249	5.0 x 0.3	5	Very thin, short, black line.
17 13 02.0	−28 24 00	B 250	15 x 15	4	Diffused.
17 13 48.8	−20 09 00	B 251	20 x 5	3	Dusky; elongated NE and SW.
17 15 31.8	−22 34 00	B 253	60 x 60		Irregular dark region.
17 20 35.2	−23 28 00	B 255	5 x 5	5	Dusky.
17 22 12.4	−28 50 00	B 256	50 x 10	5	Very irregular and diffused; longest E and W.
17 22 01.5	−19 18 00	B 259	30 x 30	4	Irregular dark area.
17 24 48.9	−25 37 00	B 260	12 x 7		Diffused; elongated N and S.
17 25 04.0	−23 02 00	B 261	14 x 5	4	Elongated E and W; diffused on S side.
17 25 32.6	−22 37 00	B 262	30 x 30	4	Large dark region; diffused except on N border.
17 27 12.8	−25 32 00	B 264	10 x 1	4	Narrow; black; E and W; bends N at E end.
17 27 36.6	−25 12 00	B 265	18 x 7	4	Irregular; N and S; diffused on E side.
17 28 07.2	−20 56 00	B 266	30 x 5	3	Curved; NE and SW.
17 28 31.8	−25 13 00	B 267	5 x 3	5	Small, very black; elongated NW and SE.
17 31 25.9	−20 31 00	B 268	100 x 50	4	Irregular dark area.
17 32 13.5	−22 46 00	B 269	60 x 28		Dusky region, slightly elongated NW and SE.
17 32 43.0	−19 36 00	B 270	11 x 11	5	Round; in NE part of B268.
17 37 35.9	−23 25 00	B 272	45 x 45	3	Region of irregular dark markings.
17 38 03.6	−22 44 00	B 274	18 x 3.5	4	Triangular; definite; elongated N and S.
17 39 39.0	−19 49 00	B 276	40 x 40	6	Broken region of dark markings.
17 40 44.9	−23 04 00	B 277	18 x 18	4	Consists of two narrow arms in V shape; E and W.
17 44 33.2	−22 34 00	B 279	60 x 60	3	Irregular dark area.
17 44 57.1	−20 43 00	B 280	60 x 60	3	Irregular dusky area.
17 46 47.3	−23 43 00	B 281		2	Dark loop.
17 48 36.5	−23 28 00	B 282	18 x 4		Elongated NE and SW; sharp on NW side.
17 56 36.8	−29 01 00	B 289	35 x 7	4	Dark space between star clouds.
18 01 30.3	−28 36 30	B 294	3 x 3	3	Definite; star in SW part.
17 21 06.0	−26 47 00	LDN 1773	60 x 10	6	**Pipe Nebula**.

PLANETARY NEBULAE

RA h m s	Dec ° ′ ″	Name	Diam ″	Mag (P)	Mag (V)	Mag cent ★	Alt Name	Notes
17 01 33.8	−21 49 34	IC 4634	24	10.7	10.9	13.9	PK 0+12.1	Small triangle of mag 11.9-13.5 stars E 1′.5.

BRIGHT NEBULAE

RA h m s	Dec ° ′ ″	Name	Dim Maj x min	Type	BC	Color	Notes
16 57 00.0	−40 20 00	IC 4628	90 x 60	E	2-5	2-4	= **Gum 56**. Elongated and very irregular in shape.
17 20 24.0	−35 51 00	NGC 6334	35 x 20	E	2-5	3-4	= **RCW 127**. A series of dark lanes divides this nebular complex into four larger (7′–10′) sections roughly centered around a smaller (2′–3′) cometary shaped condensation.
17 24 42.0	−34 12 00	NGC 6357	25 x 25	E	2-5	3-4	Considerably mottled and very irregular in shape. On red photos it is vaguely reminiscent of a fainter version of the Orion nebula.
17 16 54.0	−36 21 00	RCW 126	16 x 4	E	4-5	3-4	Very faint and diffuse, extended ENE-WSW; irregular surface brightness.
17 34 42.0	−32 35 00	RCW 132	80 x 30	E	3-5	3-4	In an area extremely rich in faint stars. The NW section contains several small patches of dark nebulosities.
17 12 18.0	−38 29 00	Sh2-3	12 x 8	E	2-5		Egg-shaped object extended NNW-SSE with an 8th mag star in the N part. The northern two-thirds of the object is for the most part obscured by absorbing matter, especially on the E side. Brightest part is a 6′ x 3′ crescent on S end, centered roughly 6′ SSE of the involved star.
17 29 06.0	−31 33 00	Sh2-13	40 x 35	E	3-5	3-4	The entire region surrounding Sh 2-13 is littered with faint nebulosities and is extremely rich in faint stars.
17 46 36.0	−29 18 00	Sh2-16	12 x 12	E	3-5	4-4	In a rich star field. There is a small patch of nebulosity 3′ across, centered about 5′ off the NE edge of Sh 2-16.

DARK NEBULAE

RA h m s	Dec ° ′ ″	Name	Dim ′ Maj x min	Opacity	Notes
16 44 45.0	−40 20 00	B 44a	5 x 5	5	Irregular; sharpest on SE side.
17 01 42.0	−40 41 00	B 48	40 x 15	5	Fairly well defined NE and SW.
17 02 39.5	−33 16 00	B 49		3	Small.
17 02 54.1	−34 23 00	B 50	15 x 15	6	Large, irregular dark space.
17 06 11.3	−33 35 00	B 53	30 x 10	4	Large; diffuse; curved toward the E at N end.
17 06 34.0	−34 15 00	B 54	5 x 5	5	Small, round; close S of 11 mag star.
17 07 33.1	−32 00 00	B 55	16 x 16	5	Irregular.
17 08 48.6	−32 06 00	B 56	3 x 3	5	Small.
17 11 12.2	−40 25 00	B 58	30 x 20	6	Slightly extended N and S; a darker core at NE side.
16 38 24.3	−35 25 00	B 231	50 x 40	6	Dusky; sharpest on W side, diffuses to the E.
16 43 44.4	−39 49 00	B 232	10 x 10		Dusky; N and S; two small stars in it.
16 44 45.4	−35 24 00	B 233	55 x 20	5	Diffused; N and S.
16 46 26.5	−30 29 00	B 234	30 x 6	1	Narrow.
16 48 54.4	−29 48 00	B 236			Center of system of indistinct dark lanes.
16 48 55.0	−29 58 00	B 237	30 x 6	1	Dark lane N of magnitude 8 star.
16 55 00.1	−31 07 00	B 239	15 x 2.5	1	Curved; very black and narrow.
16 59 17.6	−35 22 00	B 240	20 x 20		Black.
16 59 27.2	−30 12 00	B 241	18 x 6	2	Dusky; diffused; about 20′ W of M62.

BRIGHT NEBULAE

RA h m s	Dec ° ′ ″	Name	Dim ′ Maj x min	Type	BC	Color	Notes
08 44 48.0	−41 20 00	Gum 15	20 x 15	E	3-5	2-4	= **RCW 32**. Irregularly round and somewhat mottled in appearance. On photos a narrow rift of obscuring matter 1′ wide and 7′ long (E-W) is visible very close S of the brightest involved star.
08 51 00.0	−42 05 00	Gum 17	100 x 65	E	3-5	4-4	= **RCW 33**. Very faint and diffuse nebulosity; fairly even surface brightness.
08 59 30.0	−47 27 00	Gum 23	25 x 20	E	2-5	2-4	= **RCW 38**. A nebular complex which appears largely obscured, effectively breaking it up into one small and three larger nebulosities.
09 02 24.0	−48 42 00	Gum 25	7 x 6	E	2-5		= **RCW 40**. Roundish and of rather even surface brightness. The smaller **RCW 39** (not plotted) lies 20′ NNE. It is of similar surface brightness and about 2′.5 across.
09 00 18.0	−45 57 00	NGC 2736	20 x 3	SNR-E	2-5	2-4	Part of Gum Nebula. A long, narrow streak less than 1′ wide, aligned NNE-SSW. It is brightest along the northern two-thirds of its length and best defined along the E edge. Off the W edge are many short, faint, nebulous strands of nebulosity, filamentary in nature.

BRIGHT NEBULAE

RA h m s	Dec ° ′ ″	Name	Dim ′ Maj x min	Type	BC	Color	Notes
08 30 00.0	−45 00 00	Gum 12	1200 x 720	SNR-E	4-5		**Vela Supernova Remnant** or **Gum Nebula**. Very filamentary structure.
08 44 48.0	−41 20 00	Gum 15	20 x 15	E	3-5	2-4	= **RCW 32**. Irregularly round and somewhat mottled in appearance. On photos a narrow rift of obscuring matter 1' wide and 7' long (E-W) is visible very close S of the brightest involved star.
08 51 00.0	−42 05 00	Gum 17	100 x 65	E	3-5	4-4	= **RCW 33**. Very faint and diffuse nebulosity; fairly even surface brightness.
08 35 36.0	−40 40 00	NGC 2626	5 x 5	E+R	1-5	1-4	A 10th mag star involved in the N part of an irregularly round nebula; an extensive absorption region some 3' by 4' in size off N side of NGC 2626.

BRIGHT NEBULAE

RA h m s	Dec ° ′ ″	Name	Dim ′ Maj x min	Type	BC	Color	Notes
12 44 46.1	−54 31 10	Boomerang Nebula	1.4 x 0.6				
11 28 54.0	−62 41 00	Gum 39	20 x 15	E	3-5	3-4	= **RCW 60** North. Irregular in shape and slightly extended E-W. The nebula is rather evenly illuminated except for a slightly brighter narrow strip along the NW perimeter where it is best defined.
11 28 54.0	−62 56 00	IC 2872	15 x 6	E	3-5	3-4	= **RCW 60** South. Extended NNE-SSW and somewhat mottled being brighter in the S part; several stars involved.
11 01 18.0	−59 51 00	NGC 3503	3 x 3	E+R	3-5	2-4	Roundish nebula with three 10th mag stars involved and several others of comparable brightness in the nearby surrounding field. The field is very rich in faint stars, except a region to the W and NW.
11 11 30.0	−61 22 00	NGC 3576	3 x 3	E	2-5		A bright knot; westernmost of six; part of the RCW 57 complex.
11 11 54.0	−61 14 00	NGC 3579	20 x 15	E	2-5		A knot; second in a group of six; part of the RCW 57 complex.
11 12 06.0	−61 18 00	NGC 3581		E	2-5		A fan-shaped nebulosity with a 12th mag star involved; third in a group of six; part of the RCW 57 complex.
11 12 06.0	−61 17 00	NGC 3582		E	2-5		This is the brightest in a group of six small nebulae. The group is somewhat wedge-shaped and about 8′ x 5′ in extent, being essentially a single nebula divided by dark lanes; part of the RCW 57 complex.
11 12 18.0	−61 13 00	NGC 3584		E	2-5		Fifth nebula in a group of six; part of the RCW 57 complex.
11 12 36.0	−61 21 00	NGC 3586		E	2-5		Elongated roughly E-W; easternmost of six; part of the RCW 57 complex.
11 12 00.0	−61 12 00	RCW 57	50 x 25	E	2-5		A large and very irregular nebular complex consisting of two main parts catalogued as RCW 57 West and RCW 57 East, each part with many individual condensations.

DARK NEBULAE

RA h m s	Dec ° ′ ″	Name	Dim ′ Maj x min	Opacity	Notes
12 53 00.0	−63 00 00	Coalsack	55 x 55		A dark patch on the Milky Way. It appears completely black to the naked eye, but is not uniformly dark.

BRIGHT NEBULAE

RA h m s	Dec ° ′ ″	Name	Dim ′ Maj x min	Type	BC	Color	Notes
10 37 30.0	−60 58 00	Anonymous					The brightest part is shaped like a broad irregular crescent, 7′ x 2′ and convex to the ENE; several stars involved.
10 46 18.0	−58 39 00	Gum 32	7 x 7	E	3-5		Ring-shaped. The brightest part forms a broad crescent roughly 10′ x 0′.3 which is convex to the WSW. The opposite edge is
10 16 48.0	−57 57 00	NGC 3199	20 x 15	E	3-5		well defined and there are many stars involved in the nebulosity, including a double.
10 23 54.0	−57 45 00	NGC 3247	7 x 7	E	2-5		Irregularly roundish and somewhat mottled. There are several smaller, detached nebulosities in the outlying areas. (A) Includes nebula **GUM 29 = RCW 49 = Bran 300B**.
10 37 42.0	−58 40 00	NGC 3324	16 x 14	E+R	2-5	2-4	A rather bright nebula, very irregular in shape and best defined along the NW perimeter. It lies in a rich star field and contains the double star h4338 (mag 8.5, 9.5, sep. 6″, E-W).
10 43 48.0	−59 52 00	NGC 3372	120 x 120	E	1-5	3-4	**Eta Carinae Nebula**. Very bright and beyond description, surpassing even the Great Orion Nebula. It is segmented by prominent dark lanes of absorbing matter.
11 01 18.0	−59 51 00	NGC 3503	3 x 3	E+R	3-5	2-4	Roundish nebula with three 10th mag stars involved and several others of comparable brightness in the nearby surrounding field. The field is very rich in faint stars, except a region to the W and NW.
10 05 12.0	−58 57 00	RCW 47	25 x 20	E	3-5		Irregular in shape and mottled; in a field very rich in faint stars. At the W border of this nebula is a nova shell involved with a 9th mag star.
10 27 24.0	−57 10 00	RCW 50	10 x 7	E	4-5		Slightly elongated, irregularly oval nebulosity of low surface brightness. The nebula and surrounding field is very rich in very faint stars.

BRIGHT NEBULAE

RA h m s	Dec ° ′ ″	Name	Dim ′ Maj x min	Type	BC	Color	Notes
11 28 54.0	−62 41 00	Gum 39	20 x 15	E	3-5	3-4	= **RCW 60** North. Irregular in shape and slightly extended E-W. The nebula is rather evenly illuminated except for a slightly brighter narrow strip along the NW perimeter where it is best defined.
11 30 24.0	−63 50 00	Gum 41	15 x 15	E	3-5	3-4	= **RCW 61**. Irregularly round and slightly mottled nebula.
11 28 54.0	−62 56 00	IC 2872	15 x 6	E	3-5	3-4	= **RCW 60** South. Extended NNE-SSW and somewhat mottled being brighter in the S part; several stars involved.
11 37 18.0	−63 11 00	IC 2948	75 x 50	E			**Running Chicken Nebula**. Somewhat mottled, especially the NW part; S part brighter.
11 50 12.0	−64 52 00	IC 2966	3 x 2	E+R	2-5	2-4	= **vdBH 56**. Even surface brightness and slightly extended E-W; fairly well-defined outline.
11 06 18.0	−65 32 00	RCW 58	8 x 5		3-5		Wolf-Rayet shell in the shape of a fragmented oval ring in which is approximately centered a star of 8th mag. The two brightest segments are in the SW part; the NW perimeter is completely missing.

DARK NEBULAE

RA h m s	Dec ° ′ ″	Name	Dim ′ Maj x min	Opacity	Notes
12 53 00.0	−63 00 00	Coalsack	55 x 55		A dark patch on the Milky Way. It appears completely black to the naked eye, but is not uniformly dark.
12 25 00.0	−71 30 00	Dark Dooddad	150 x 15		

(Continued from previous page)

BRIGHT NEBULAE

RA h m s	Dec ° ′ ″	Name	Dim ′ Maj x min	Type	BC	Color	Notes
05 43 12.0	−67 53 00	LH 120-N070	7 x 7	ESNR?			Emission nebula; a faint ring with several stars involved.
04 49 24.0	−69 10 00	NGC 1698					
04 51 00.0	−69 26 00	NGC 1712					A bright, irregularly round emission nebula; brightest on the NW side.
04 52 06.0	−66 56 00	NGC 1714	1 x 1	E			Rather faint, round emission nebula; <2′ NE of NGC 1714; two stars nearby.
04 52 06.0	−66 55 00	NGC 1715	0.5 x 0.5	E			A very small, round nebula (IC 2111) involved in the NE part of a coarse cluster of faint stars, which itself is involved in a larger region of nebulosity including NGCs 1712 and 1727.
04 51 54.0	−69 24 00	NGC 1722					
04 52 12.0	−69 20 00	NGC 1727					Emission nebula and open cluster.
04 53 30.0	−66 56 00	NGC 1731		E			Stars involved; extended roughly NNW-SSE.
04 54 18.0	−67 06 00	NGC 1735	0.8 x 0.5				Emission nebula in the LMC.
04 53 00.0	−68 03 00	NGC 1736		E			Emission nebula; in a large complex in the LMC.
04 54 00.0	−69 10 00	NGC 1737		E			Irregular in form; the largest and brightest in a group of nebulae; in a large complex in the LMC. (A) Nebulous cluster or group of stars.
04 54 00.0	−69 12 00	NGC 1743	2 x 2	E			A large emission nebulosity surrounding a group of smaller nebulae including NGCs 1737, 1743 and 1748; in a large complex in the LMC.
04 54 24.0	−69 10 00	NGC 1745		E			Emission nebula and open cluster.
04 55 12.0	−67 10 00	NGC 1747		E			= **IC 2114**. Emission nebula; in a large complex in the LMC.
04 54 24.0	−69 12 00	NGC 1748	0.5 x 0.5	E			Emission nebula.
04 56 36.0	−66 32 00	NGC 1760		E			
04 56 30.0	−66 29 00	NGC 1761					Bright and well-defined emission nebula with stars involved. This bean-shaped nebula is extended ENE-WSW and set in a very rich star field. The W and E components are also catalogued as **IC 2115** and **IC 2116**, respectively.
04 56 48.0	−66 24 00	NGC 1763	5 x 3	E			
04 56 24.0	−69 24 00	NGC 1767					Bright and well-defined; a single bright star involved near the center.
04 57 42.0	−66 28 00	NGC 1769		E			Nebula and open cluster. The nebula is also catalogued as IC 2117 = **Henize 91A**.
04 57 12.0	−68 25 00	NGC 1770	3 x 2				
04 56 54.0	−69 33 00	NGC 1772					Irregularly round, moderately bright nebula; brightest on SW side.
04 58 12.0	−66 22 00	NGC 1773		E			
04 57 48.0	−69 24 00	NGC 1782					
04 59 00.0	−70 10 00	NGC 1791	2 x 2				Nebula and open cluster; in the LMC.
05 04 54.0	−68 03 00	NGC 1829					Nebula and open cluster; in a large complex in the LMC. (A) Elongated NE to SW.
05 04 24.0	−70 44 00	NGC 1833					
05 04 54.0	−70 43 00	NGC 1837					Relatively small group of stars involved in nebulosity.
05 06 00.0	−68 38 00	NGC 1839					A scattered group of relatively bright stars involved in nebulosity.
05 07 24.0	−71 11 00	NGC 1848					
05 09 24.0	−67 46 00	NGC 1852					Nebula and open cluster; in the LMC.
05 09 48.0	−68 54 00	NGC 1858					Emission nebula and open cluster. (A) Includes NGC 1871, and NGC 1873.
05 13 48.0	−67 23 00	NGC 1869		E			Nebula and open cluster; in the LMC. (A) Part of NGC 1869 association.
05 13 48.0	−67 27 00	NGC 1871					Emission nebula and open cluster. (A) Part of NGC 1869 association.
05 13 54.0	−67 20 00	NGC 1873		E			Regarded as a single object. This emission nebula and open cluster lies in a large complex in the LMC.
05 13 18.0	−69 22 00	NGC 1874/76/77	1 x 1	E			Emission nebula involved in a large complex in the LMC.
05 13 36.0	−69 23 00	NGC 1880		E			In a large complex in the LMC.
05 13 12.0	−69 21 00	NGC 1881					
05 16 54.0	−67 20 00	NGC 1895		E			Emission nebula in the LMC; three stars about 10th mag close W.
05 17 48.0	−67 53 00	NGC 1899		E			Nebula and open cluster; in the LMC. (A) Center of NW-SE elongated nebulous cluster.
05 17 42.0	−71 15 00	NGC 1914					In the LMC.
05 19 06.0	−69 39 00	NGC 1918		SNR			Emission nebula and open cluster.
05 20 12.0	−66 53 00	NGC 1919		E			
05 20 36.0	−66 48 00	NGC 1920		E			
05 19 18.0	−69 48 00	NGC 1921					
05 21 30.0	−65 29 00	NGC 1923		E			Emission nebula and open cluster.
05 21 48.0	−65 48 00	NGC 1925					
05 21 36.0	−67 56 00	NGC 1929		E			Compact nebulous object; westernmost in a group of four objects; in a large complex in the LMC.
05 21 48.0	−67 56 00	NGC 1934		E			Nebulous object, larger and more diffuse than NGC 1929; a bright star on W side.
05 22 00.0	−67 57 00	NGC 1935		E			A round and diffuse nebulous knot with several stars involved; in a large complex in the LMC.
05 22 06.0	−67 59 00	NGC 1936		E			A bright round nebulous object with a faint extensive wisp in the direction of NGC 1935; in a large complex in the LMC.
05 23 06.0	−66 23 00	NGC 1941		E			Emission nebula with several stars involved.
05 22 30.0	−70 09 00	NGC 1943					Several stars involved in nebulosity.
05 25 24.0	−66 22 00	NGC 1945		E			Emission nebula.
05 25 42.0	−66 16 00	NGC 1948		E			Emission nebula and open cluster.
05 25 06.0	−68 29 00	NGC 1949		E			Emission nebula in the LMC.
05 26 24.0	−68 50 00	NGC 1962					Regarded as one object with NGCs 1965,66,70. In a large complex in the LMC.
05 26 36.0	−68 48 00	NGC 1965					Regarded as one object with NGCs 1962,66,70. In a large complex in the LMC.
05 26 48.0	−68 49 00	NGC 1966	13 x 13				Regarded as one object with NGCs 1962,65,70. In a large complex in the LMC.
05 27 24.0	−67 28 00	NGC 1968	13 x 12				Nebula and open cluster; in the LMC.
05 26 54.0	−68 50 00	NGC 1970					Regarded as one object with NGCs 1962,65,66. In a large complex in the LMC.
05 28 00.0	−67 25 00	NGC 1974		E			Emission nebula and open cluster. (A) This is also **NGC 1991**, due to a positional error by J. Herschel.
05 27 42.0	−68 59 00	NGC 1983					In a complex region of scattered, irregular star clouds.
